

WP 400.02

Set of 10 V specimens 10x5, CuZn

Learning objectives/experiments

- together with WP 400
 - ▶ determine the notched-bar impact work
 - ▶ determine the notched-bar impact strength
 - ▶ analyse the fracture surface characteristics
 - ▶ plot a notched-bar impact work-temperature diagram

Specification

- [1] specimens for Charpy notched-bar impact test
- [2] 10 specimens made of brass, form V
- [3] accessory for WP 400 Impact test, 25Nm

Technical data

10 notched-bar impact specimens

- form: V
- LxWxH: 55x5x10mm
- angle: 45°
- notch root: 5x7mm
- notch radius: 0,25mm
- material: brass

Weight: approx. 250g

Scope of delivery

- 1 set of specimens (10 pieces)

Description

■ V specimens as accessories for the WP 400 experimental unit

The set contains ten V specimens made of brass.

This set of V specimens is available as an accessory for the WP 400 experimental unit. In a Charpy test, a notched specimen whose two ends lie on a support is broken or bent by hammer impact and drawn through the supports. The resistance of the specimen against this load provides an insight into the notched bar impact strength of the material.
